

Tucana Launches Partnership with Waterford Consultants, LLC for Groundbreaking Product Launch

Breda, The Netherlands – March 19, 2021: Today, Tucana is excited to announce its partnership with U.S. based telecom engineering firm, Waterford Consultants, LLC. Tucana is helping to spearhead Waterford's European market launch of their ground-breaking RF emissions monitoring system known as "RFIS" (Radio Frequency Infrastructure Sentry).

Headquarter in the US, Waterford successfully introduced their innovative RFIS product in the US in 2020 in response to escalating protests regarding 5G technology and the unknown long-term effects of increasing amounts of Radio

Frequency (RF) emissions from all wireless site types. RFIS was developed to improve the way wireless site compliance is managed. Prior to the development of RFIS, rooftop, tower, and in-building/DAS sites were generally surveyed and audited annually at best, allowing for a potentially prolonged state of non-compliance. The RFIS system's 24-hour emissions monitoring and compliance capabilities, on-demand report generation, and interactive user interface assists wireless operators, property owners, and regulators in addressing the public's ongoing concerns regarding the possible health risks associated with cellular antennas and towers.

"We look forward to establishing a long term and successful relationship with Tucana and are excited to introduce RFIS on a global scale" said Thomas Ferguson, CEO of Waterford.
