- [Deploy, scale and manage](#)
- [Full visibility into Data](#)

We are expanding our Cyber Security solutions with SentinelOne, the only platform that defends every endpoint against every type of attack, at every stage in the threat lifecycle.

Introduction SentinelOne

SentinelOne delivers autonomous endpoint protection through a single agent that successfully prevents, detects and responds to attacks across all major vectors. Designed for extreme ease of use, the S1 platform saves customers time by applying AI to automatically eliminate threats in real time for both on premise and cloud environments and is the only solution to provide full visibility across networks directly from the endpoint.

Dealing with today's cyber threats requires a fundamentally different approach.

SentinelOne is a certified replacement for Antivirus

What makes SentinelOne Endpoint Protection Platform the best choice?

The platform delivers:

Prevention — Reduce risk by blocking known and unknown malware before they breach endpoints.

Detection — Lightweight agent monitors all activity and applies machine learning to dynamically detect the most advanced attacks, including exploits, fileless, and sophisticated malware.

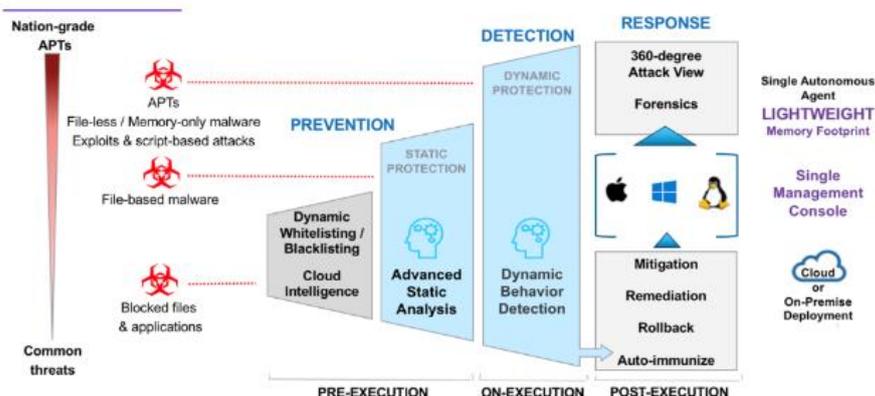

Remediation — Accelerate response by containing threats and reversing system and file modifications. The most robust mitigation and remediation functionality, with support for kill, quarantine, remove from network, and even rollback.

Forensics — 360-degree, real time view of attacks from inception to termination.

Single, Holistic Agent — Lightweight and high-performance. PC, Mac, Linux, VDI. We have you covered.

Deployment Options — SentinelOne EPP provides customers the flexibility of cloud-based or on-premise deployments.

SentinelOne Endpoint Protection Platform

Ransomware Warranty

SentinelOne is offering customers a warranty to ensure that no ransomware attack will go undetected and cause irreparable damage.

SentinelOne guarantees your protection against Ransomware attacks up to \$1,000 USD per compromised endpoint, and up to \$1M per organization.

How SentinelOne helps achieve GDPR Compliance

Learn what GDPR is, what its impact is on your network, and how SentinelOne can help achieve GDPR compliance.

implement effective endpoint protection solutions from SentinelOne that can detect, block, and remediate the effects of malware infiltration.

SentinelOne sends in-product notifications for every security event and threat detection. These may come in the form of syslog, email or SMS. It also has a vast API set allowing integration with any other notification or ticketing system which directly links to the SentinelOne EPP platform.

SentinelOne Endpoint Protection: GDPR

Deploy, scale and manage with ease

SentinelOne EPP puts the industry's most innovative prevention, detection, and response capabilities at your fingertips through a single management console that can be flexibly deployed either in the cloud or on-premise. Effortlessly scale to protect user endpoints and servers across physical, virtual, and cloud environments.

Next-Generation Endpoint and Server Protection

Full visibility into endpoint data

SentinelOne Deep Visibility extends the SentinelOne Endpoint Protection Platform (EPP) to provide full visibility into endpoint data. Its patented kernel-based monitoring allows a near real-time search across endpoints for all indicators of compromise (IOC) to empower security teams to augment real-time threat detection capabilities with a powerful tool that enables threat hunting.
